## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11-17, 21-31 are rejected under 35 U.S.C. 102(b) as being anticipation by Breed et al (US 2004/0130442).

Regarding claims 11,21,22 Breed et al teaches sensor transponder 71 70 with a facility for transmitting measurement data from a tire 74 to a receiving facility [0980][0984][1056][1291] and at least one acceleration sensor [1155][1273], characterized in that the sensor transponder is fitted on an inner side 73 of the running surface of the tire 74.

Regarding claims 12,13,26 and 27 Breed teaches a receiving facility, a receiving/transmitting antenna [0331][0729] is fitted, which is preferably arranged in a vehicle.

Regarding claims 14,23 Breed teaches a memory [1574][1576] for tire-specific parameters.

Regarding claims 15,16,24 and 25 Breed teaches the transponder has at least one pressure/temperature sensor [0271][0320][1621][1293].

Regarding claims 17,28 Breed teaches a central unit is fitted and the evaluation of the signals from the sensor transponder is conducted in the central unit (fig. 1).

Regarding claim 29-31 Breed teaches said evaluation unit comprises a comparator and an integrator, wherein said comparator has an input connected to said receiver arrangement so as to receive the measured data and has an output connected to said integrator [1273][1290][1573][0977].

***Allowable Subject Matter***

2. Claims 18-20,32-34 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The cited prior art does not disclose nor suggest a sensor transponder (is fitted with at least one acceleration sensor arranged on the inner side of a running surface of a tire , the signals from the acceleration sensor are compared with threshold values and are then integrated, and the tire contact length is calculated independently of the velocity using quotient formation.
